An affordable, intuitive and scalable Medication Adherence System

*The evriMED500/1000 is a table top dispenser, designed to easily hold a month's supply of TB medication. The modular design allows for diverse container sizes. The evriMED1000 allows real-time adherence management automatically synchronizing with the **Wisepill** or **99DOTS** cloud service. The evriMED system is an affordable scalable tool for managing TB medication adherence.*

“As treatment supervision alone is not likely to be sufficient to ensure good TB treatment outcomes, additional treatment adherence interventions need to be provided.”

WHO DS-TB Guidelines, 2017

evriMED Features

- Audible and Visual on-board alarms (evriMED500/1000)
- Realtime adherence management (evriMED1000)
- Extended battery life. Battery management and low battery indicators (evriMED500/1000)
- Dispenser refill indicator (evriMED500/1000)
- SMS reminders (evriMED1000)
- Device health heartbeat and management (evriMED500/1000)
- Extensive medication event storage on device (evriMED500/1000)

evriMED Benefits

- WHO has concluded that adherence interventions significantly improve treatment outcomes for both DOT and SAT patients.
- Digital medication monitors are a proven effective adherence intervention, delivering reminders and enabling enhanced counseling and differentiated care.
- Digital medication monitors are highly patient-centric and low patient burden. They permit remote, electronic observation of medication taking by self-administering patients.
- Digital medication monitors save health system time and money by focusing provider time on demonstrably poor adherers.
- Digital medication monitors have been shown to significantly improve medication adherence and have been well accepted by both patients and providers.
